Dear Sir,

Having viewed the Energy Price Fact Sheets of various retailers, [REDACTED] their pricing structure is similar with variations to the tariff types, what is noticeable is the high percentage increase in the Controlled load section with variations to the Daily supply charges among all three manipulating their costs with the same results!! Also noticeable is the high percentage increase ([REDACTED]) with the Time of use tariffs in the Off Peak charges 36% / Controlled Load 53% at the end of the day these are the areas that will have a costly effect on consumers.

You really ask yourself is there competition out there or a Cartel among all the retailers! Discounts may apply but its questionable as to the real value of supply.

Regards

Warren Pratten
