

Submission by [REDACTED]-21 August 2025

I believe it is essential that strict legislation is introduced that mandates the recycling of all single use plastic packaging including soft plastics. The long term goal should be to incentivise users of this type of packaging to remove it entirely from their supply/production chains. Plastic waste in the environment poses a significant risk to all life on this planet. We as a developed nation must lead by example and remove this toxic waste from our environment.
