

Submission by Sancell Pty Ltd-17 April 2025

Main Concerns The SPSA seems to overlap the efforts of APCO and not sure why both efforts are not more closely aligned The current co-regulatory process had not been successful to date and Sancell is concerned that a a voluntary system will achieve its goals. The lack of clear mandated targets initially does not align with the expectation of Government and Consumers. Rigorous enforcement is required to avoid Free Riders and Greenwash. We are also concerned about financing the management of the Redcycle Waste from the proceeds of this project. There appears to be a focus on Chemical Recycling as a solution for quality PCR. This technology as experienced overseas is not yet proven at scale.
